Abstract

This pages teaches JSWMM-PreRunoff component as OMS3 component. Some preliminary knowledge and installation of OMS is mandatory. This component is a support to Runoff NET3 node. It is a mandatory pre-process to JSWMM-Runoff component. It generates the rainfall data and it adapts the same rainfall data to runoff user defined step.

@Version:

0.1

@License:

GPL v.3

@Inputs:

SWMMObject dataStructure;

@Outputs:

HashMap<Integer, LinkedHashMap<Instant, Double>> adaptedRainfallData;

Keywords: OMS; JSWMM; JGrass-NewAGE Component

Code Information

Code repository

This points to the source code <https://github.com/geoframecomponents/jswm>

Executables

This points to the jar file that, once downloaded can be used in the OMS console.

Component Algorithms and internals

The component checks if the dataStructure is empty, than it create three rainfall data series. Each rainfall series is saved in a LinkedHashMap<Instant, Double>, with the timestep defined in the input file for runoff.

The LinkedHashMap is saved in a HashMap with key the number of curve consider to generate the rainfall inputs (in order 3 minutes, 5 minutes and 10 minutes).

Software specifications

To generate rainfall inputs to design properly the network.
